                                                                                                                                                                                                                                                                 PP
                                                                                                                                                                                                                                                                                                                                             ö
                                                                                   The invention relates to isolated lung tumour-specific proteins and their corresponding cDNA molecules. Lung tumour-specific proteins and their antigen-presenting cells are useful for stimulating and/or the development of cancer. The invention protein, and for inhibiting lung the development of cancer. The invention also relates to a composition lung tumour specific oil immune response, and for treating cancer. The lung tumour specific oilgonucleotide is useful in gene therapy and for diagnosis, detection and treatment of lung cancer. The present sequence is human T cell epitope related to lung tumour-specific protein.
                                                                                                                                                                                                                                                                                                                                                                                                                         Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or
                                                                                                                                                                                                                                                           Gaps
                              New human lung-specific polynuclectides and polypeptides for the diagnosis and treatment of disease e.g. lung cancer -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and may be useful in the diagnosis and/or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to tyckokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hemmatopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where cancer-associated nucleic acid molecules (N) and proteins. The colon the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in the prevention. Cancer antigens have cytostatic activity and can be used in the prevention, therapy and vaccine production. N and P may be used in the prevention. Captression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions associated with decreased expression by rectifying mutations or deletions cancer associated ps, additionally, N may be used to produce the colon cancer-associated Ps. Additionally, N may be used to produce the colon cancer-associated Ps. Colorecting the nucleic acids into a host cell and culturing the cell of the express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers, AAH37196 to AAH37204 and AAH37199 represent sequences used in the exemplification of the

                                                                                                                                                                                         16-AUG-2001.
The invention relates to novel genes (AAL34669-AAL37666) and proteins CC (ABB03087-ABB04109) associated with the musculoskeletal system useful CC (ABB03087-ABB04109) associated with the musculoskeletal system useful CC preventing, treating or ameliorating medical conditions e.g. by core in content or gene therapy. The genes are isolated from a range of human core is also factored in the specification. The nucleic acids, proteins, core is a prevention of: (a) cancer, e.g. breast and ovarian cancer and prevention of: (a) cancer, e.g. breast and ovarian cancer and prevention of: (a) cancer, e.g. breast and ovarian cancer and core rangers of the adrenal gland, bone, bone marrow, breast, core gastrointestinal tract, liver, lung, or urogenital; (b) immune cancers of sheadson's disease, allergies mellitus, crom's disease, and semania, autoimmune tharby disease, allergies mellitus, crom's disease, and ulcerative colitis; multiple sclerosis, rheumatoid arthritis and ulcerative colitis; multiple sclerosis, rheumatoid arthritis and ulcerative colitis; and (f) infectious diseases such as viral, bacterial, fungal and cancer in fertions diseases such as viral, bacterial, fungal and cancer in the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. WiPo.int/Pub/Published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                     Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB1678-ABB18001) useful for preventing, treating or amellorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the genesiare the interpretation of the interpretation of the dispansis, treatment and prevention of (ant)agonists are useful on the dispansis, treatment and prevention of (a) cancer, e.g. breast marrow, breast, gastrointestinal tract, liver, lung, or urogenital; chaemolytic anaemia, autoimmune thyroiditis, dispetes mellitus, crown's disease, multiple solerosis, rheumatoid arthritis and ulcerative of use and parasing (c) cardiovascular disorders such as myocardial ischaemias; epilepsy; and (f) infectious diseases e.g. cerebral anoxia and parasitic infectious diseases such as viral, bacterial, fungal Nore: The seminance data for this contains.
                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                          10 SLGDSETLSQTELRKKERKKKRERKFQANCGIDFIIFWI---FWILL------
                                                                                                                                                                                       The present sequence is provided in a specification relating to the preparation of a chimera cDNA library containing a cDNA encoding a functional protein. The specification describes the preparation of a serotonin-related cDNA library, and the preparation of a forcein-coupled receptor chimera cDNA library from which an orphan G protein-coupled receptor chimera spinal library from which an orphan G protein-coupled receptor cDNA was isolated.
                                                                                                                                                                                                                                                                                                       Gaps

RP-23 is a ligand for sphingosine-1-phosphate (sphingosine-1-Po4) which is formed by the breakdown of sphingolipids and is involved in cell signalling. Sphingosine-1-Po4 causes an increase in receptor-generated adenylyl cyclase activity and an increase in intracellular calcium concentration. The present invention relates to methods for determining whether a test compound modulates interactions between sphingosine-1-Po4 and RP-23 a particular G-protein coupled receptor. The method is useful for determining a modulator which binds sphingosine-1-Po4 to an RP-23 receptor. The compounds identified are useful as therapeutic agents for treating cardiovascular diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Determining modulator of binding of sphingosine-1-PO4 to RP-23 receptor, involves incubating sphingosine-1-PO4 and RP-23 receptor with test compound, determining the binding and comparing with a control ^{\circ}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; G-protein coupled receptor; GPCR; transgenic animal; receptor; genetic therapy; pharmacological; genetic disease; neuropsychological; neurological; psychotic illness; nephrotropic; gynaecological; pyschostimulant; glucocorticoid-induced receptor.

```

Serotonin receptor; 5-hydroxytryptamine; human 5-HT2C; non-endogenous; active form; point mutation; third intracellular loop; specificity; linkage; transduction pathway; biological response; antagonist; AP-1; baselline intracellular response; compound; treatment; prevention; agent; central nervous system; cardiovascular disorder; drug screening; gastric or inflammatory disorder; constitutive expression.

Homo sapiens.

Active form of human 5-HT2C serotonin receptor (AP-1).

(first entry)

25-JAN-2000

```
Novel non-human transgenic animal, especially transgenic mice useful for identifying an agent that modulates expression or function of target gene, comprises disruptions in target G protein-coupled receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 271 TIGDVTTEQYLALR---RKKKTTVKMLVLVVVLFALCWFPLNCYVLLLSSKAIHTNNALY

                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a non-human transgenic animal having targetted G-protein coupled receptor (GPCR) gene disruptions in melanocottin-3 gene 5-HF-2B gene, chemoKinne receptor 9A gene, glucocorticoid-induced receptor gene, orphan GPRIS gene, orphan GPRIS gene, corphan GPRIS gene, can gene, orphan GPRIS gene, can gene, cransgenic animal is useful for identifying an agent that modulates the cappession or function of the target gene, for identifying an agent that capped construct is useful for producing a transgenic animal.

A transgenic construct is useful for producing a transgenic animal, cappersonic animal is useful for producing a transgenic animal, construct is useful for producing a transgenic animal, cappersonic mouse. The transgenic animal is useful for testing the efficacy of proposed genetic animal is useful for preferably a transgenic construct as neurological, neuropsychological or psychotic illnesses. The transgenic animal is also useful as models for diseases, disorders or conditions associated with phenotypes relating to a disruption in a target, and to identify pharmaceuticals, therapies, the the contract of the contract of the capped of the contract of the capped of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   other phenotypic characteristics of the animal. An agent which modulates the expression of the target gene is useful as a therapeutic for treating conditions associated with a disruption of the target gene. The present sequence is human glucocorticoid-induced receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          327
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FAFHWFAMSSTCYNPFIYCWLNENFRVELKALLSMCORPFKPOEDRLPSPVPSFRVAWTE 387

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         form of human 5-HT2C serotionin receptor. A point mutation replaces a Servital Library in the third intracellular loop of the 5-HT2C receptor. This activated receptor allows linkage to the transduction pathway and produces a biological response. This sequence can be used to identify antagonists that bind serotion receptors and reduces the baseline intracellular response caused by receptor activation. Constitutive expression of this receptor is suitable for drug screening and to identify agents of very high specificity. These compounds are potentially useful for treating or preventing disorders involving central nervous system and cardiovascular, gastric or inflammatory disorders, that
                                                                                                                                                                                                                                                       /note= "Ser in endogenous form of 5-HT2C replaced by Lys"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present protein sequence is the non-endogenous, constitutively active

-urea derivatives (I) which are modulators of non-endogenous, constitutively activated forms of serotonin 5-HT2A (and 5-HT2A) receptors and inverse agonists to 5-HT2A receptors. (I) modulate serotonin 5-HT(2A) receptor activity and are potentially useful for treating central nervous system (CNS), gastrointestinal, cardiovascular and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes novel 1-Phenyl-3-(3-(4-bromo-3-pyrazoly1)phenyl)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        54
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New 1-phenyl-3-(3-(4-bromo-3-pyrazolyl)phenyl)-urea derivatives, useful as 5-HT(2A) receptor ligands e.g. for treating central nervous system, gastrointestinal, cardiovascular and inflammatory disorders
                                                                                                                                                                                                                                                                                                            1-Phenyl-3-(3-(4-bromo-3-pyrazolyl)phenyl)-urea derivative; modulator; central nervous system disorder; CNS; gastrointestinal disorder; cardiovascular disorder; inflammatory disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     6 RDHASLGDSETLSQTELRKKERKKKR------ERKFQANCGIDFIIFWIFWILLF
                                                                                                                                                                                                                                                                                  Human serotonin receptor; 5-HT2A receptor; 5-HT2C receptor; agonist;

The present invention describes primer sets for synthesising 5602

full-length cDNAs defined in the specification. Where a primer set

comprises: (a) an oligo-dr primer and an oligonucleotide comprises one of

the 5602 nucleotide sequences defined in the specification, where the

oligonucleotide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to a

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which comprises a form of

complementary strand of a polynucleotide on the complementary to a

complementary strand of a polynucleotide on the complementary to a

complementary strand of a polynucleotide on the complementary to a

complementary strand of a polynucleotide on those defined in

the 5602 nucleotide which comprises at least 15 nucleotides and the complementary to the

complementary strand of the primers are useful for synthesisting polynucleotides,

the 5'-end sequence/3'-end sequence is selected from those defined in

the specification. The primers are useful for synthesisting polynucleotides,

the full-length cDNAs. The primers are also useful for the

detection and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

CONAs easily without any specialised methods. AAH(3618 to AAH(3629 to AAH(3632)

AAH(3633 to AAH(3612 represent human anino acid sequences; and AAH(3629 to AAH(362)

of the process to oligonal eactines and one acid in the exemplification

of the process to oligonal eactines.

The process to oligonal eactines are also used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                             Human; primer; detection; diagnosis; antisense therapy; gene therapy.

The present interface as open reading frame, ORFX, where X is 1-11491 (see Table In the specification). ABN15762 to ABN27252 encode the human ORFX proteins are useful for proteins given in ABP00101 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polynucleotide considered and in gene therapy. ORFX sequences can be used in from the protein of a sequences can be used in gene therapy. ORFX sequences can be used in the manufacture disorders, ritrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic lupus exythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious disease, autoimmune thyroiditis, myssthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, inclsions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut proteins are also bone degenerative disorders, or periodontal disease, and for gut proteins in various tissues and conditions resulting from reperfusion injury in various tissues and conditions resulting from N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO present invention describes substantially purified human proteins ftp.wipo.int/pub/published_pct_sequences systemic cytokine damage.

Sequence 31, Application US/09292071
Patent No. 6107324
GENERAL INFORMATION:
APPLICANT: Behan, Dominic
APPLICANT: Chalmers, Derick
TITLE OF INVENTION: No. 6107324-Endogenous, Constitutively Activated
TITLE OF INVENTION: Human Serotonin Receptors and Small Molecule Modulators
NUMBER OF SEQUENCES: 33
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12 GDSE-----TLSQTELRKKERKKKRERKFQANCGIDFIIFWIFWILLFSHHWIQESLLCP 66

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

        Serotonin receptor 1C - human

N;Alternate names: 5-hydroxytryptamine receptor 1C (5-HTR1C)

C;Species: Homo sapiens (man)

C;Date: 31-Mar-1992 #sequence_revision 31-Mar-1992 #text_change 13-Aug-1999

C;Accession: JS0616

R;Saltzman, A.G.; Morse, B.; Whitman, M.M.; Ivanshchenko, Y.; Jaye, M.; Felder, S. Biochem: Biophys. Res. Commun. 181, 1469-1478, 1991

A;Fitle: Cloning of the human serotonin 5-HTZ and 5-HTIC receptor subtypes.

                                                                                                                                                                                                                    in the mesodermal layer and at the neurula stage, exclusively expressed in the mesodermal layer and at the neurula stage in the lateral plate mesoderm. Larval expression is observed in the endothelium of the primary blood vessels and the forming heart.

-I- DEVELOPMENTAL STAGE: First expressed at the late blastula stage, increases during gastrulation and remains constant between neurula
                                                                                                                                         -1- FUNCTION: Putative receptor for an apelin-like peptide coupled to G proteins that inhibit adenylate cyclase activity.
-1- SUBCELLULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                           and larva stages.
-!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

KVMIHD -> QNADYCRKKGHDS (IN ISOFORM A).
                                                                    -1- SUBCELLULAR LOCATION: Integral membrane protein.
-1- ALTERNATIVE PRODUCTS: 3 ISOFORMS: D (SHOWN HERE), A AND B; ARE PRODUCED BY ALTERNATIVE SPLICING. ISOFORM D IS THE LONGEST ISOFORM BUT ISOFORMS A AND B APPEAR TO BE EXPRESSED AT HIGHER LEVELS.
-1- TISSUE SPECIFICITY: ISOFORM A IS THE PREDOMINANT ISOFORM IN SPLEEN, CADDATE AND HIPPOCAMPUS. ISOFORM B IS EXPRESSED AT LOWER LEVELS, AND ISOFORM D IS A MINOR ISOFORM.
-1- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
FUNCTION: THIS IS ONE OF THE SEVERAL DIFFERENT RECEPTORS FOR 5-HYDROXYTRYPTAMINE (SEROTONIN), A BIOGENIC HORMONE THAT FUNCTIONS AS A NEUROTRANSMITTER, A HORMONE, AND A MITOGEN. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS THAT STIMULATE ADENYLATE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                7 POTENTIAL.
